Go Solar Inc. Inaugurates First Solar-Powered Electric Car Charging Station

Go Solar, Inc. announces the east coast's **first** solar-powered charging station for electric cars. All electric or plug-in hybrid car owners are welcome to 'fill-up' and drive away clean with emission-free electricity. The Solar Traveler, Go Solar's portable solar power station, is now outfitted with a level-2 electric car charger. Wherever the Solar Traveler is located, electric car owners can plug-in and re-charge their batteries up to 4 times faster than with a domestic outlet.

Today at Eagle Chevrolet in Riverhead, Go Solar inaugurated our charging station by plugging in a Chevy Volt. Fully charged, the Chevy Volt can travel 40 miles. In one year, our Solar Traveler charging station could supply enough clean electricity to propel the Volt 8,000 miles.

Installing solar on a house to charge an electric car makes environmental and financial sense. Gary Minnick, President of Go Solar says, "*Conventional electricity generation and car emissions are the two largest contributors to our carbon footprint. Both sources of greenhouse gases are eliminated when using solar-generated electricity to power electric cars.*" Adam Eberhardt, Go Solar's chief engineer adds, "*Over the 30 year lifespan of a solar installation, the cost to charge an electric car is only 77 cents per 'gallon'.*"

Go Solar, Inc. has been designing and installing solar since 1979, and has installed the most solar electric and solar hot water systems in Suffolk County. Go Solar has 4 NABCEP certified installers, and an A+ rating with the Better Business Bureau.
